FOR IMMEDIATE RELEASE

HORSES, HEALTHY LUNGS AND HALOTHERAPY

Global Halotherapy Solutions (GHS) Announces the HaloEQ™ ---a Portable Halogenerator for the Horse Racing, Showjumping and Polo Industries to Help Horses Breathe Better

Largo, FL March 22nd, 2018 – Global Halotherapy Solutions(www.halotherapysolutions.com) is launching the HaloEQ today after months of co-development, testing, and protocol creation from a number of key industry Equine leaders.

“Dry Salt Therapy/Halotherapy is one of the fastest growing natural wellness therapies in the U.S. and worldwide for people with respiratory conditions, so we are very excited to bring the same technology to the world of Equine”, said Steve Spiro, CEO/Founder of Global Halotherapy Solutions.

The HaloEQ:

- Is very lightweight, so it's easy to carry from stall to stall to service many horses
- Is very mobile, so it's easy to transport between cities seasonally
- Is a fast and very effective treatment for both sick horses and for prevention of respiratory conditions in healthy horses
- uses DRY salt therapy instead of wet salt therapy which results in deeper salt penetration in the lungs, providing greater benefits to the horse

“I've been testing the HaloEQ for 9 months, and it's truly been remarkable! My sick horses get healthier much faster (and without antibiotics) allowing them to get back to training quicker and more effectively, which has really helped their performances on race days. And for my horses that are not sick, I've seen a strengthening of their immune system which has resulted in much less respiratory illnesses. And finally, horses that have experienced EIPH have seen excellent results from the HaloEQ,” said Kelly Breen, 2011 Belmont Stakes Winning Trainer”.

“Kelly Breen introduced Halotherapy into his stable, during the 2017 racing season. I have observed a direct correlation between Halotherapy and reduced airway disease. Often airways displaying acute or chronic mucus on endoscopy can be resolved utilizing Halotherapy alone.

When protocols of antibiotics, antihistamines or bronchial dilators are warranted , resolution of clinical symptoms is often accomplished at a more rapid rate, when Halotherapy is incorporated into the treatment regime. As a 30 year veteran of a Thoroughbred race track practice I recommend Halotherapy as an adjunct treatment to airway disease”, said Bernard Dowd DVM
